

PYRODIGITAL EAGLE WIRELESS BASE

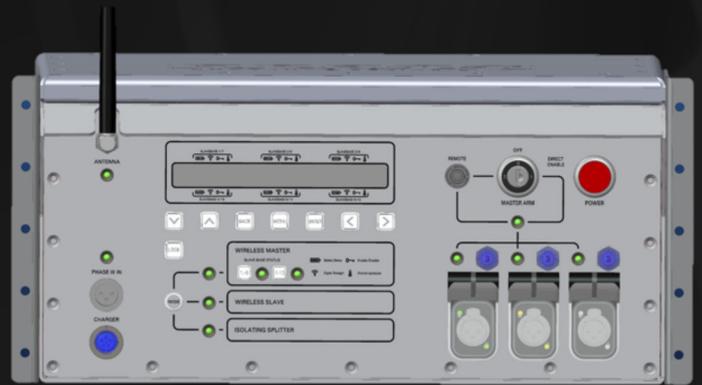

The Eagle Base allows you to extend your network for wireless devices. Use one Eagle Wireless Base as Master that simply gets connected to your FC-3 or FC-A Field Controller using a usual network cable. Use another or several Eagle Wireless Bases set to slave mode to create Wireless Bridges. Or use the Pyrodigital Sparrow Wireless Adapters to make your FM-A Firing Modules stand-alone wireless devices. One Eagle Base in master mode can drive up to 12 Eagle Bases in slave mode and up to 128 FM-A with the Sparrow Adapter. In Slave Mode the Eagle Base is capable of driving a full Pyrodigital network and includes the network power boosting technology of the FC-A Field Controller.

USA: 902-928 MHz
1 Watt ERP
Spread Spectrum

Europe: 869 MHz
0.5 Watt ERP

Further frequencies follow

- integrated active 3-way PD network splitter
- deadman enable option with key switch
- 5 channels
- waterproof housing
- set the device to master or slave as you require
- or use the Eagle Base as Isolating Network Booster
- integrated power boosting technology from the FC-A Field Controller
- powered by the VRLA battery technology of the FC-A Field Controller
- Charger connector (front side) and external power supply connector (rear side)
- simply exchange the wireless card to set up the device for other frequency bands
- mounting option for 19" rack or foot option for the firing side (both come with the device)

PYRODIGITAL SPARROW WIRELESS ADAPTER

Drive up to 128 FM-A Firing Modules with one Pyrodigital Eagle Wireless Base. Simply connect a Sparrow Wireless Adapter to the FM-A you want to drive wireless.

- waterproof housing
- click-in connection
- simply exchange the wireless card to set up the device for other frequency bands
- powered by exchangeable AA batteries (primary and rechargeable)

USA: 902-928 MHz

0.5 Watt ERP

Further frequencies follow

***Simply click in the Sparrow Wireless Adapter and
turn your FM-A into a stand-alone wireless device***

WIRELESS SYSTEM: EXAMPLE SETUP

Each Eagle can drive a full PD network with 128 FMs.
Each Sparrow turns one FM-A into a wireless stand-alone device.
